

Community Ultrasound

A New Service provided by Yorkshire Health Solutions

We are pleased to introduce a new high quality community ultrasound service.

Yorkshire Health Solutions and Novus Health have developed a high quality community ultrasound service to be performed in GP surgeries throughout the Wakefield and North Kirklees and North Yorkshire regions. The service is provided by YHS utilising experienced Yorkshire based, UK trained ultrasonographers supported by local NHS Consultant Radiologists. The service is underpinned by a robust clinical governance programme putting patient safety, clinical effectiveness and patient experience at the centre of our service. Ultrasound examinations will be continuously audited to ensure excellence both in terms of imaging and reporting.

Appointments are referred through fax, e-referral or Choose and Book. Reports will be returned by secure e-mail within 72 hours to the referring practice for incorporation into patient records. If onward referral is required to secondary care the images and report can be transferred via the image exchange portal (IEP). Our ultrasonographers will be available within the practices to discuss patients and offer imaging advice to medical staff. They will also be supported by multispecialty Consultant Radiologists who will also be available on a daily basis to discuss cases with GP's.

YHS is working with multiple primary care practitioners to provide this community ultrasound service. Our partnership will provide a high quality ultrasound service that is performed closer to patients' homes performed by senior sonographers supported by locally based Consultant Radiologists.

Visit our website , e mail us at info@yorkshirehealthsolutions.com or telephone 0113 3854665 for further information. Please contact if you have any queries or if you wish to have the service at your practice.

Key Benefits

- High quality service
- Led by local NHS Radiologists
- Multiple primary care locations
- Integration into secondary care clinical pathways
- Experienced local ultrasonographers
- Electronic transfer of images to secondary care
- Multiple referral options including, fax, e-referral and C&B
- Working to achieve high user satisfaction
- Ultrasound in your practice
